National Health Observatory Observer

The National Health Observatory was established by the law of March 2, 2021, in order to improve knowledge on the state of health of the population, to contribute to the identification of public health priorities and to improve the quality and efficiency of the health system.

The National Health Observatory is a newly created administration and placed under the authority of the Minister of Health. The Observatory includes a Council of observers who adopts:

- the various reports and proposals of the Observatory
- the areas and orientations of the Observatory's multiannual work program
- the Observatory's budget proposals
- the Observatory's requests for human or technical resources.

The observers are national and international experts from various backgrounds, intervening in accordance with their expertise to define, and to accompany the work of the Observatory and to guarantee its scientific quality.

Profiles sought (9 different areas of expertise)

- Experts from scientific, academic or institutional communities:
 - Established level of expertise in its field supported by significant publications or contributions
 - Current or recent professional activity in the domain of expertise
 - Active professional network within the respective expert community
- 9 areas of expertise are sought (one full member and one substitute member for each area of expertise)
 - 1. an expert with skills in epidemiology;
 - 2. an expert with skills in public health;
 - 3. an expert with skills in health systems analysis;
 - 4. an expert with skills in registry management;
 - 5. an expert with skills in population health studies;
 - 6. an expert with skills in health statistics or in biostatistics;
 - 7. an expert with skills in health economics;
 - 8. an expert with demographic skills;
 - 9. an expert with skills in patient-reported outcome measures.
