

EUPHA and EU-funded projects

EUPHA has a long history of participating in EU-funded projects and is interested to explore options for contributing to new project proposals. Here we describe the type of projects EUPHA would be interested in and the role EUPHA can play in these projects.

Type of projects

- Preferably projects with a 100% funding rate. Co-funding can be discussed, but will not always be possible.
- Projects with a broad scope, addressing public health issues that are of relevance for a large part of EUPHA's constituency and that contribute to achieving EUPHA's mission and strategy goals.

EUPHA's role

EUPHA can deploy its tools and network for the benefits of EU-funded projects. What does this mean? EUPHA can:

- Facilitate the organisation of pre-conferences and/or workshops during the annual European Public Health Conferences.
- Facilitate the organisation of project meetings back-to-back with the annual European Public Health Conferences.
- Disseminate project results via EUPHA's monthly Newsletter (30K subscribers) and/or EUPHA website.
- (Co-)organise webinars for the dissemination of project results.
- Provide organisational support for the organisation of an event for the European Public Health Week, which takes place annually in May.
- Provide access to our network (EUPHA members, EUPHA sections) e.g., for surveys, recruiting experts for focus group sessions, or finding co-authors for papers.
- Provide organisational support for the development of a special issue-supplement to the European Journal of Public Health.

In practice, this often takes the shape of EUPHA having specific tasks in the dissemination work package of EU-funded projects.

Given the limited size of the EUPHA secretariat, EUPHA cannot take the lead of the dissemination work package (or other work packages).

EUPHA is also specifically interested in taking on dissemination tasks as described above through subcontracting.
