1. EUPHA update

**EUPHAnxt - October 2016 update**

EUPHAnxt is involved in a wide range of activities in Vienna 2016. All students and young professionals are welcome to join these events:

- Four skills building seminars and workshops co-organised by EUPHAnxt have been accepted and will take place in Vienna.
- An informal get together for students and young professionals will be organised after the welcome reception, on Thursday 10th of November 21:00, at Einstein, a pub next to the Vienna City Hall.
- EUPHAnxt annual meeting will be held on Thursday 10th of November 12.00-13.00.

More information about the conference activities can be found on **EUPHAnxt Flash – Vienna 2016 special edition** and **EUPHAnxt Facebook page**.

Join EUPHAnxt [here](#).

**EUPHA supports Implementing the Position of research and patient organisations on the General Data Protection Regulation**

Personal data is a vital resource for research that can save and improve lives. The Data Protection Regulation provides a strong basis for the safe use of personal data in research. Member States now have a crucial role to play in implementation.

Member States should:

- introduce clear laws for research with safeguards and exemptions that support research while respecting people’s privacy;
- work across national ministries and with the research community to ensure that laws and guidance are practical, proportionate to any risks, and build on current good practice; and
- work together to promote harmonisation and compatibility between national systems where possible, to facilitate cross-border research.

**Achievements of Slovak scientists presented in Brussels**

With regard to their involvement in the European Research Area, the presentations of two significant Slovak health research scientists were held during the meeting of the Research Working Party in Brussels on 23 September 2016.

Dr Iveta Nagyova from the Pavol Jozef Šafárik University in Košice presented the mission and activities of the European Public Health Association (EUPHA), where she acts as President of the Section of Chronic Diseases.

2. European Public Health Conference

**9th European Public Health Conference: All for Health, Health for All**

Austria Centre Vienna, 9 - 12 November 2016

The Vienna 2016 conference is approaching fast. The scientific programme offers a wide range of public health topics organised in 16 tracks:

A All for Health

B Health for All
In the programme, there is ample time for networking, including 25 meetings inviting participants to ‘Join the network’.

Last chance to register: https://ephconference.eu/registration-fees-and-information-20

3. EUPHA members update

News from SESPAS, the Spanish Society of Public Health and Health Administration

SESPAS is pleased to announce its XVII conference, jointly organised by SESPAS, the Health Economics Association (AES) and the Spanish Society of Epidemiology (SEE), to be held in Barcelona between the 6th and 8th of September, 2017. The overall theme of the conference – Science for Action – is inspired by the idea that by offering rigorous analysis and scientific method, we can counter the growing ability of special interest groups to define and dominate the political agenda. We invite everyone to attend the meeting and to actively participate with your contributions to make this first joint SESPAS Congress a success. We will soon distribute its programme, highlighting the international speakers and sessions.

SESPAS’ president, Beatriz González López-Valcárcel, successfully represented EUPHA in the first General Assembly of the Alliance of Public Health Associations of the Americas (AASPA), held in Panama from July 28 to 30. Furthermore, SESPAS participated in the Preventing Overdiagnosis Conference held in Barcelona last September, co-organising a workshop on iatrogenics with the Spanish Organization of Medical Colleges (OMC). SESPAS continues collaborating with the Health and Trade Network to prevent the negative health effects from international trade agreements like the TTIP. Our society will also participate in the EPHC preconference ‘Making health instead of care as the business of healthcare - Enhancing the advocacy role of national public health associations in Europe’, on Wednesday 9 November (14:00-17:00), jointly organised with the Dutch society.

Last September SESPAS published a positioning on the debate of compulsory vaccination in Spain with the title “Individual and collective responsibilities of the institutions, professionals and the population regarding vaccines”. The society also endorsed in September an international positioning on Implementing the General Data Protection Regulation to maintain a competitive environment for research in Europe. And next November, the 2016 SESPAS Report “Public health and health policies: from knowledge to action” will be officially presented in the Andalusian Public Health School and will soon be available in SESPAS website.

For more information, please visit our website http://www.sespas.es/

Public Health Switzerland: annual conference

Menschen auf der Flucht – eine Herausforderung für das Schweizer Gesundheitssystem / « Les réfugiés et personnes déplacées – un défi pour le système de santé suisse »

Date / Location:
Organiser:
Public Health Schweiz und Swiss School of Public Health (SSPH+) / Santé publique Suisse et la Swiss School of Public Health (SSPH+).

French Society of Public Health: call against tobacco
The French Society of Public Health (SFSP) is supporting the call for public health professionals to act against tobacco. The alliance includes more than 30 organisations both national and international. The objective is to have 100'000 signatures to support this initiative. Sign up now:
Pour signer : http://appeldes100000.fr/

4. European Journal of Public Health

The European Journal of Public Health is a multidisciplinary journal in the field of public health.
The EJPH is published bimonthly. The journal provides a forum for discussion and debate of current international public health issues with a focus on the European region. In 2016, the impact factor of the journal is at 2.751. The 5-year impact factor is 2.512.
The EJPH is the official journal of EUPHA.

5. Call for proposals, job opportunities

**Job vacancy at the European Centre for Disease Prevention and Control (ECDC)**
The European Centre for Disease Prevention and Control (ECDC) invites applications for the following position:
Head of Section Public Health Training (PHC)
The deadline is 14 November 2016. For more information, visit the ECDC website: http://ecdc.europa.eu/en/aboutus/jobs/Pages/JobOpportunities.aspx

**Vacancy notice for the post of Director of ECDC**
The Director is the legal representative and public face of the European Centre for Disease Prevention and Control (ECDC) and is accountable to the ECDC Management Board. She/he will lead and manage ECDC and take overall responsibility for its operations, ensuring the achievement of ECDC’s objectives.
For detailed information on the job description, requirements and the application procedure, please visit the ECDC website at: http://ecdc.europa.eu/en/aboutus/jobs/Pages/JobOpportunities.aspx
The deadline for applications is 9 November 2016 at 12:00 noon Brussels time.

**Call for papers: The Role of Digital Health to Support the Achievement of the Sustainable Development Goals (SDGs)**
*International Journal of Medical Informatics*

**Deadlines:**
*Submit abstract: December 19, 2016*
*Internal review abstracts for scope: January 16, 2017*
*Submit full manuscript: March 31, 2017*

**Rationale:**
According to the World Health Organization, available data show that, in spite of the major progress during the Millennium Development Goal (MDG) era, major challenges remain in terms of reducing maternal and child mortality, improving nutrition, and achieving further progress in the battle against infectious diseases such as HIV/AIDS, tuberculosis, malaria, neglected tropical diseases, and hepatitis. The situation analysis also provides evidence of the importance of addressing non-communicable diseases and their risk factors, such as tobacco use, mental health problems, road traffic injuries, and environmental health issues.
Data on water and sanitation and air quality show that much more needs to be done to reduce risks to health. Weak health systems are a major obstacle in many countries, resulting in major deficiencies in universal health coverage for even the most basic health services and in inadequate preparedness for health emergencies. All these challenges are included under the Sustainable Development Goal (SDG) #3: “Ensure healthy lives and promote well-being for all at all ages”.
On the other hand, the spread and uptake of information and communications technologies (ICT) have the potential to level the playing field, by reducing some of these challenges and enabling information-sharing that will assist in equalizing these differences. Many ICT systems and devices, initially expensive and of limited dissemination, have become affordable and are widely used across many levels of society. Digital health technologies will play a significant role in achieving the SDGs.

**Main Theme:**
- We are soliciting manuscripts for inclusion in a special issue of Health Informatics titled, “The Role of Digital Health to Support the Achievement of the Sustainable Development Goals (SDGs).”
- We welcome conceptual or empirical manuscripts with a local, national or international focus on the topic of digital health technologies and the SDG #3.
- We are particularly interested in manuscripts that employ interdisciplinary, intersectional, and/or innovative approaches to the conceptualization and measurement of the use of digital health in the achievement of the SDG #3.
It is envisioned that the collection of articles included in this special issue will provide robust support for future directions in the digital health research, advocacy, and policy related to the impact of the SDGs. The special issue of the International Journal of Medical Informatics will provide a platform for countries to make an analysis of what can be done in the area of digital health since the approval of the SDGs.

**Manuscript submission process:**

Review will take place in two stages. First, we ask for extended abstracts of 900-1000 words, due December 19, 2016, that provide enough information about the conceptualization and measurement of digital health technologies and SDG #3 for review. We strongly encourage authors to mention: (1) the innovation in their approach to the study of digital health technologies and SDG #3; and (2) how this work will set the stage for future research, advocacy, and/or policy in this area. Authors whose abstracts fall within the scope of the special issue will be invited to submit a full manuscript, due March 31, 2017. Acceptance of abstract does not ensure manuscript acceptance, as all manuscripts will be subject to full editorial board and peer review.

**Max Planck Institute for Demographic Research (MPIDR): Statistical analyst**

The Statistical Analyst will support the research carried out by the Max Planck Research Group: Gender Gaps in Health and Survival (GGHS) by performing statistical programming and by analyzing large datasets, particularly register datasets and population-based survey datasets. The analyst will also be responsible for cleaning and preparing datasets for analysis, and for providing assistance as needed with other data management activities.

The GGHS investigates whether gender differences in health and mortality are universal across countries and the extent to which ethnic background, social position, civil status, and reproduction drive these differences. The research interests of the group also encompass health trends at older ages, determinants of long-term care use, cohort differences in health at older ages, and related topics.

The Statistical Analyst may also be asked to help teach some courses. Knowledge of German is not a requirement.

**Required:**
- a PhD in statistics, biostatistics, mathematics, or applied disciplines with strong quantitative skills,
- or more than three years of post-graduate work experience in a similar position
- experience using statistical software (e.g., Stata, R)
- knowledge of statistical methods commonly used in epidemiology, social science, and demography (e.g., ordinary least squares and logistic regression models, longitudinal data analysis, survival analysis, and multilevel models)

**Preferred:**
- experience working with large-scale datasets and multiple projects simultaneously
- experience analyzing health-related data
- ability to work equally well independently and in a collaborative setting
- an interest in learning new methods

Applications should include (in one pdf file):
- a detailed CV
- a letter of interest (maximum two pages)
- full contact information (e-mail and mail addresses) of two references

Applications should be sent to: apply-gghs@demogr.mpg.de. To ensure consideration, please submit your application by December 9, 2016. The review of applications will continue until the position is filled. Preference will be given to candidates who are able to start at an earlier point in time.

The initial appointment is for 3 years, but may be extended.

**Max Planck Institute for Demographic Research (MPIDR): Post-Doctoral Fellow or Research Scientist**

The post-doc / research scientist will carry out research within the Max Planck Research Group: Gender Gaps in Health and Survival. His/her research will focus on investigating gender differences in
health and mortality by ethnic background, and on examining the respective roles of social position, civil status and reproduction in driving these differences. The research interests of the group also encompass health trends at older ages, determinants of long-term care use, cohort differences in health at older ages, and related topics.

The post-doc may also be asked to help teach some courses, co-supervise PhD students, organize workshops and lectures, and assist in the daily running of the group. Knowledge of German is not a requirement.

Qualifications/Requirements
- a PhD in epidemiology/public health, demography, sociology, statistics, or related fields
- a strong publication record (depending on career stage)
- strong quantitative skills and experience with individual-level data analysis
- a keen interest in health and mortality research and in working with large longitudinal data, such as register data
- a clear research plan, and a clear idea of how this plan fits within the overall research profile of the group
- the ability to work equally well independently and in a collaborative setting
- an excellent command of English, both in writing and in speaking
- an international network or a record of international collaboration is an advantage

Applications should include (in one pdf file):
1. a detailed CV (incl. honors, awards, and publications)
2. a two-page motivation letter that provides a clear picture of your current research activities and future research plans, describes how your interests align with the group’s interests, and explains how you meet the selection criteria for this position
3. full contact information (e-mail and mail addresses) of two references

Applications should be sent to: appl-gghs@demogr.mpg.de. To ensure consideration, submit your application by December 9, 2016. The review of applications will continue until the position is filled.

The initial Post-doc/Research Scientist appointment is for three years, but may be extended. Compensation for the appointment, which is based on salary level 14 of the German TVöD system, may vary depending on the qualifications of the candidate and is subject to the rules that apply to federal employees in Germany.

6. Interesting news

Tax on sugary foods and drinks backed by World Health Organisation
The World Health Organization (WHO) has added its support to countries which place a “sugar tax” on soft drinks. A new report from the body found that raising prices by 20% or more results in lower consumption and “improved nutrition.”

Academic Network on Sexual Health and Rights Policy (ANSER)
On 30 November, ANSER will be officially launched in Gent. This event will be followed immediately by an international conference on 1 and 2 December. The ANSER network unites 17 academic institutions from around the world and is funded by Ghent University and coordinated by ICRH. Speakers at the launch event will include Elke Sleurs (Belgian State Secretary for Science Policy) and Neil Datta (Secretary of the European Parliamentary Forum on Population and development). The purpose of the conference is to present research results in the field of SRHR, discuss their implications for policy and link researchers with policy makers. The conference is open to all researchers, policy makers, students and others that are interested in SRHR policy research. You can register for the launch and the conference on: anser@ugent.be ANSER website: http://www.ugent.be/anser/en

Call for abstracts
Within the context of the ANSER conference (see above) we are inviting colleagues and students from universities and organisations worldwide to present their research on sexual and reproductive health and rights. The presentations have to address a topic related to SRHR and should make a link to policy. The best abstracts will be selected for oral and poster presentation. Abstracts should be limited
Effective emissions limits in Europe could save thousands of lives every year
Effective emissions limits could save thousands of lives every year, yet more than half of coal power stations in Europe are operating with 'permission to pollute' above limits set in EU law. These are the findings of a new report ‘Lifting Europe's Dark Cloud: How cutting coal saves lives' published today by the European Environmental Bureau (EEB), the Health and Environment Alliance (HEAL), Olimate Action Network (CAN) Europe, WWF and Sandbag.

When is maternal immunization ethically justified?
Vaccination during pregnancy can protect women, fetuses and newborn children against infectious diseases -- especially in developing countries. Maternal immunization however also raises ethical questions. One expert has made a first systematic analysis of the ethics of maternal immunization, concluding that vaccination during pregnancy is ethically appropriate if it can protect mother or child against a concrete risk of a dangerous infection

Health of Europe revealed in new report
A new report compares health attitudes across 21 European countries. Findings show that women are more likely to suffer from depression and headaches, and men are much more likely to smoke and view themselves as overweight. The UK and Portug display highest binge drinking rates, and across Europe, men consume almost twice as much alcohol as women.
