- Introducing a proposal to form an IG for Implementation research

Dear members of EUPHA,

On behalf of EuroScan international network/i-HTS, we would like to invite you to the first public discussion regarding the potential implementation of an IG Implementation research group as a common action of EuroScan and HTAi.

Following several years of preparation and discussion, we would like to extend the focus of HTA and Early Awareness beyond the classical area of regulation and reimbursement.

Over the years we have observed that effective technologies are not implemented to their full potential and struggle to increase system sustainability. We would like to form a group which can give advice based on evidence to increase awareness, acceptance and effective implementation.

In the attached documents, we have described the initial ideas agreed by the EuroScan board to improve the situation. At the same time EuroScan would like to improve the options for innovators to access advice on how to proceed towards successful implementation.

EuroScan would be happy to welcome you to discuss this approach and invite you to join the virtual meeting on the **11. March 11.30 (UTC+ 1)**.

Please register via the link or QR code provided below.

With kind regards,

Iñaki Gutierrez-Ibarluzea

President EuroScan international network
