

# to-reach

transferring innovation in health systems

## Prioritization for transferring health service and policy innovations between health systems

*Shaping the future joint research programme on health services and systems research*

**Peter Groenewegen**

*Netherlands institute for health services research  
(on behalf of Section HSR and TO-REACH Consortium)*

*1 December 2018*

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 733274.

# Countries face comparable challenges

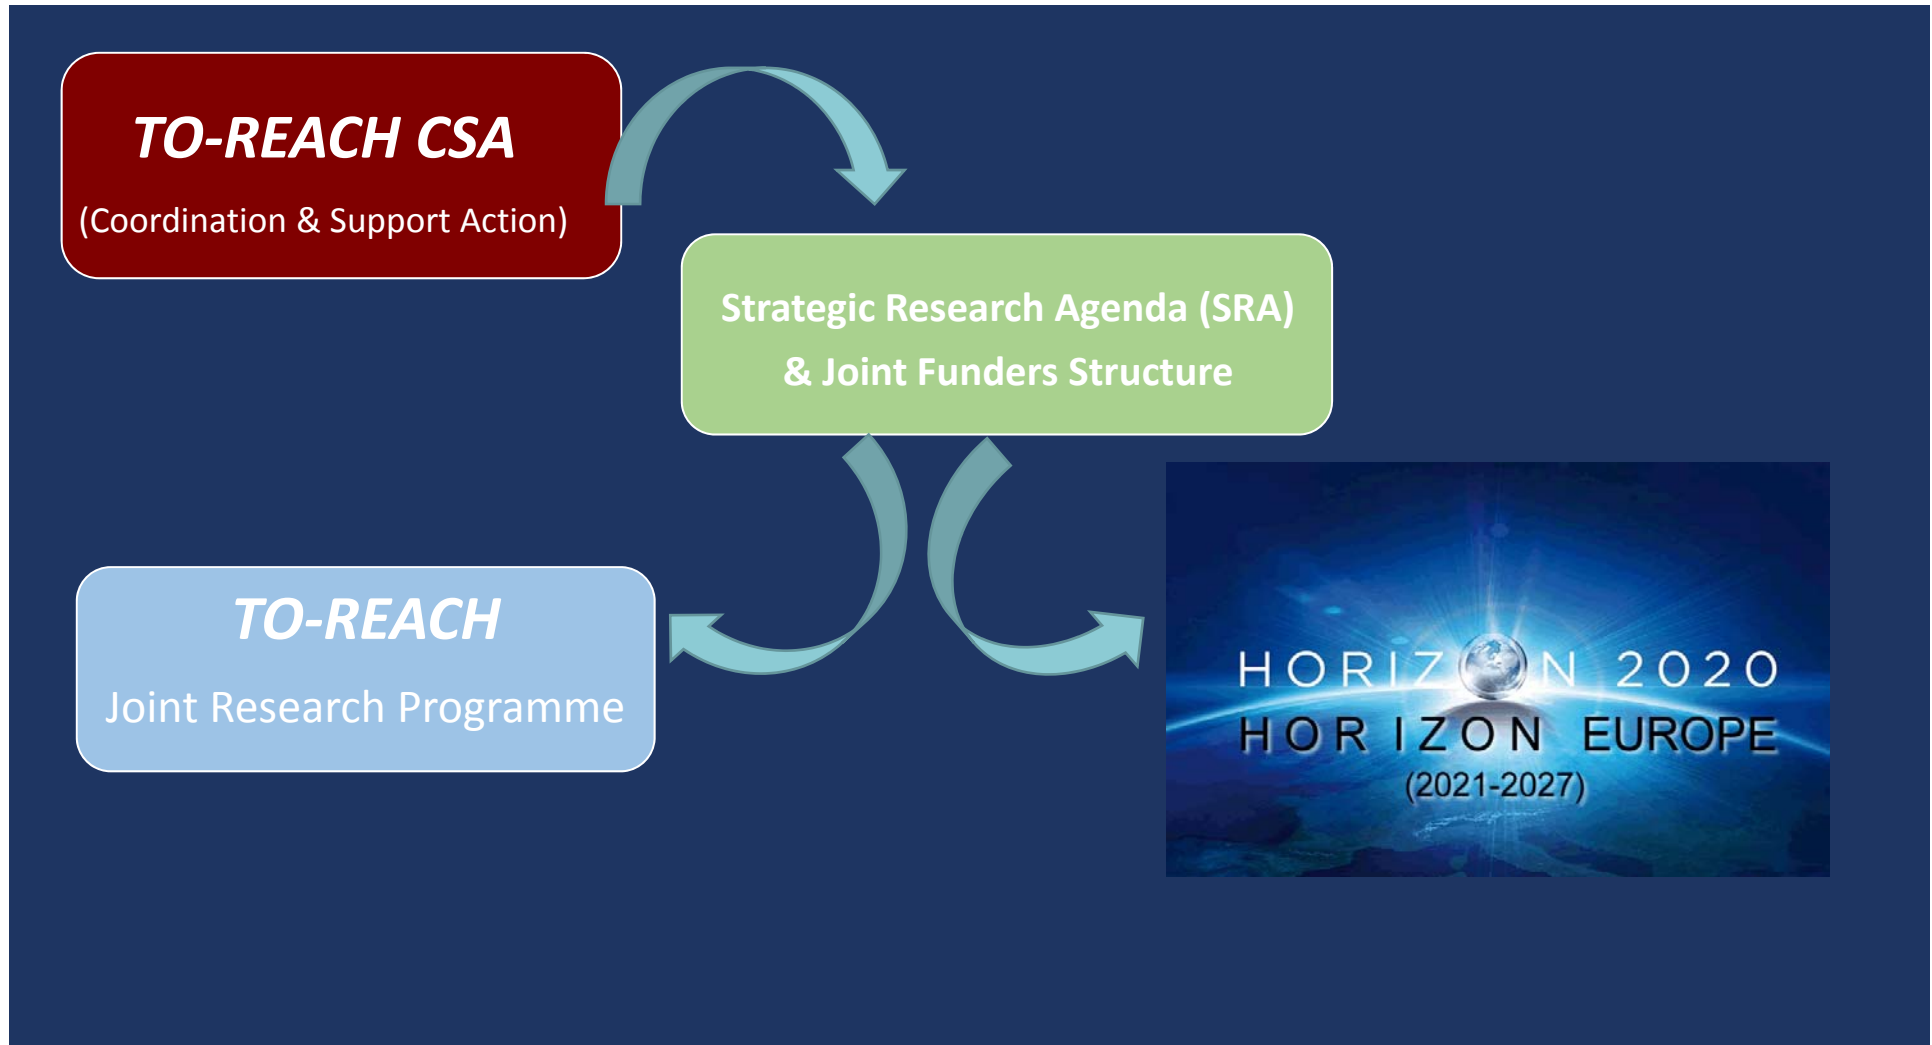

- Ageing populations, increasing (multiple) chronic health problems
- Advances in health care: growing numbers of people surviving with chronic illness
- Advances in medical technology: potential and requirements for new methods of delivering and organising care
- Growing expectations
- Financial pressures
- **Health systems need to address these complex challenges**
  - **Focus on service and policy innovation**
  - **Key factors for 'success' and requirements for transfer and scaling-up**

# What TO-REACH aims to achieve

## Effective policy learning across health systems

- Developing guidance to assess whether a health service or policy innovation may be 'worth' transferring and upscaling
- Advance HSSR: moving from description (how does it work?) to explanation (why does it work this way?) to prediction (how likely is it to work elsewhere?)
- Advancing high quality cross-country health services research to inform policy development and decision making

# Joint Research Programme on Health Services and Systems

# The TO-REACH consortium

US and Canada

27 partners  
19 countries

Europe

Israel

*Policy Advisory Council and wider HSR network in all partner and EU countries*

# Fit within Horizon Europe (2021-2027)

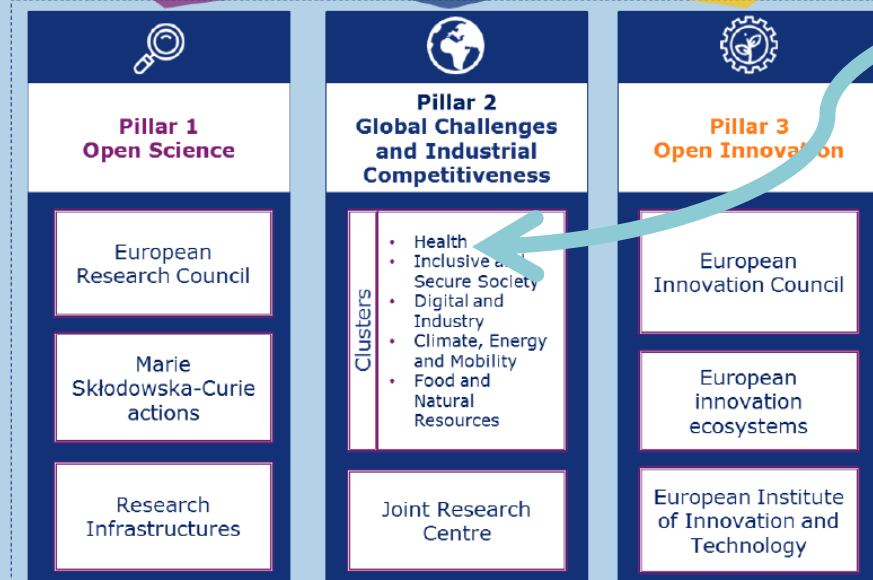

## Specific objectives of the Programme

Support the creation and diffusion of high-quality knowledge

Strengthen the impact of R&I in supporting EU policies

Foster all forms of innovation and strengthen market deployment

Optimise the Programme's delivery for impact in a strengthened ERA

- ### Health
- Health throughout the life course
  - Environmental and social health determinants
  - Non-communicable and rare diseases
  - Infectious diseases
  - Tools, technologies and digital solutions for health
  - **Health care systems**

*First tangible impact of TO-REACH*

## Strengthening the European Research Area

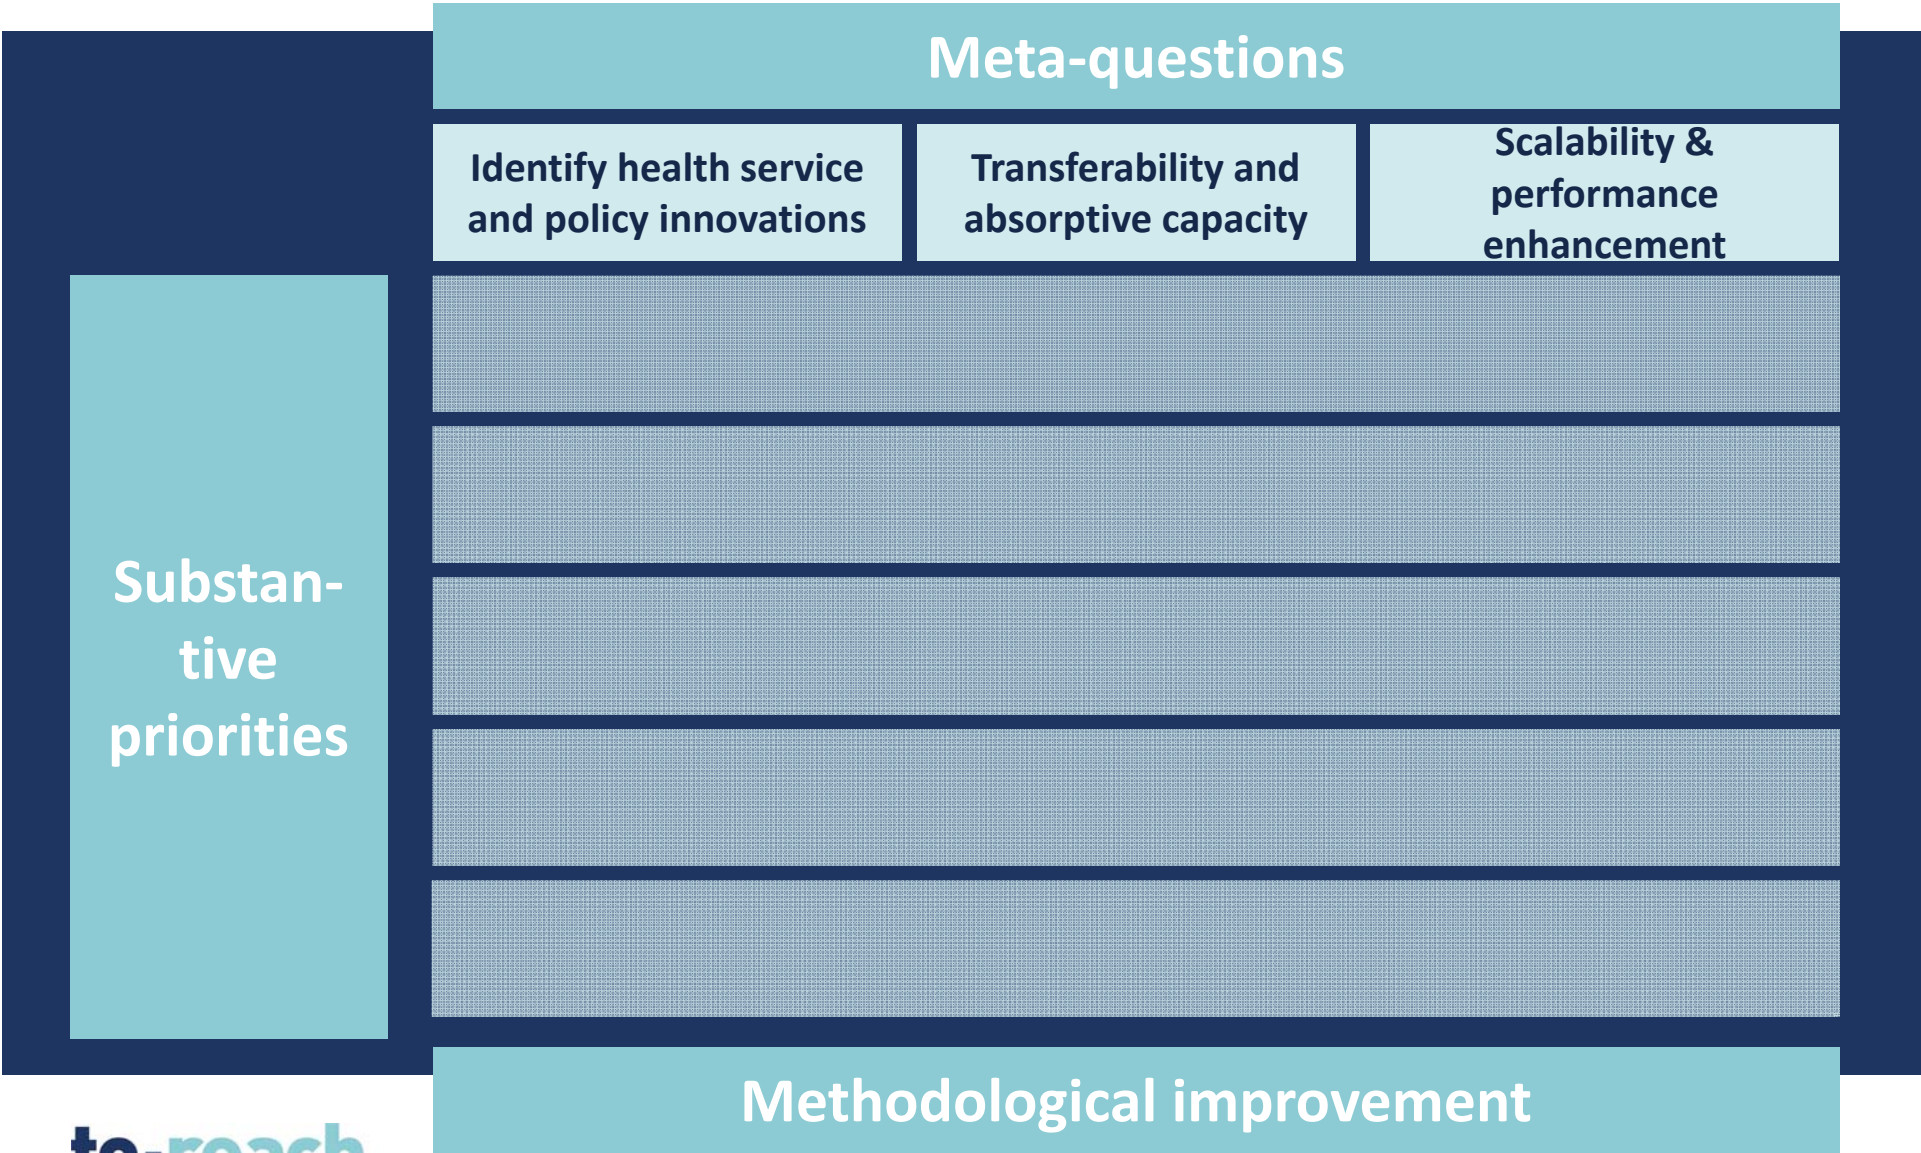

Sharing excellence

Reforming and Enhancing the European R&I system

# Conceptual model of TO-REACH

# Identifying priority areas for comparative health services and systems research

# Identify problems that need solving

- **Mapping national and EU level policy & strategy documents**
- **National consultations in partner countries of TO-REACH**
- **Online stakeholder consultations at international level**
- **Alignment with Policy Advisory Council and Sister Initiatives**

# National stakeholder meetings

## Format:

- In 15 partner countries
- Mostly small-scale roundtable meetings
- Involving policy, NGOs, industry, academia
- Using a prepared format and templates, flexibility to vary

**Average 25 participants per country, so about 400 experts across Europe**

*(often with a strong representation of academics, but all main types of stakeholders (public officers, NGOs and industry) were represented)*

Sunday 28 January 2018  
Listen to Campus FM

## National Round Table Consultation on Public Health and Health Services Research

This project has received funding from the European innovation programme under grant agreement No 7

# Online stakeholder consultations

- Based on past stakeholder surveys
- Open to the wider community, including in non-partner countries
- Circulated by TO-REACH partners, external networks and DG RTD

- In total 638 responses
- From 40 countries
- Most from Ireland, Netherlands, Finland, Italy, UK
- Least from Czech Rep., Estonia, Iceland, Liechtenstein, Luxemburg

## To-Reach Online Consultation

Join the **to-reach** online consultation

**What is this consultation about?**

We would like to know your opinion about **priorities in the area of health services and systems** that should be tackled by research. The aim is to use these as inputs into a research agenda for research funding bodies at national and European level, to identify key research questions that are tailored to the needs of stakeholders within Europe and in other regions. For this reason, we want to ask which priority challenges need to be solved in your own country, region or organisation, and if possible, which types of research questions you think should be addressed to help solve such (current or future) challenges, especially with an international comparative perspective.

**This Website**

This website is a developing resource for publishing the plans, activity and outputs of the To-Reach project.

# Responses on closed questions

# Interim outcomes of the mapping and consultations

1. Overarching priority: From disease-oriented and patient-centred care to Person- and Population-Centred Care
2. This requires
  - a. integration across all healthcare sectors
  - b. Integration across traditional boundaries (social care, occupational health, prevention)
3. Implications for the development of services
  - a. Long-term Care needs to be developed to meet future needs
  - b. Hospitals have to develop new roles, tasks, and organisational structures;
  - c. Integrated services require strong primary care
  - d. Mental health care needs to be reinforced
4. The following areas are instrumental:
  - a. Adequate human resources, skill mix, roles and tasks of healthcare professionals
  - b. Adequate information and communication technology embedded in people-centred services
  - c. Quality improvement and better ways of measuring it
  - d. Achieving better financing and good governance.

**Policy  
priorities**

**Enablers**

# Zooming in on HTA priorities: a few example responses

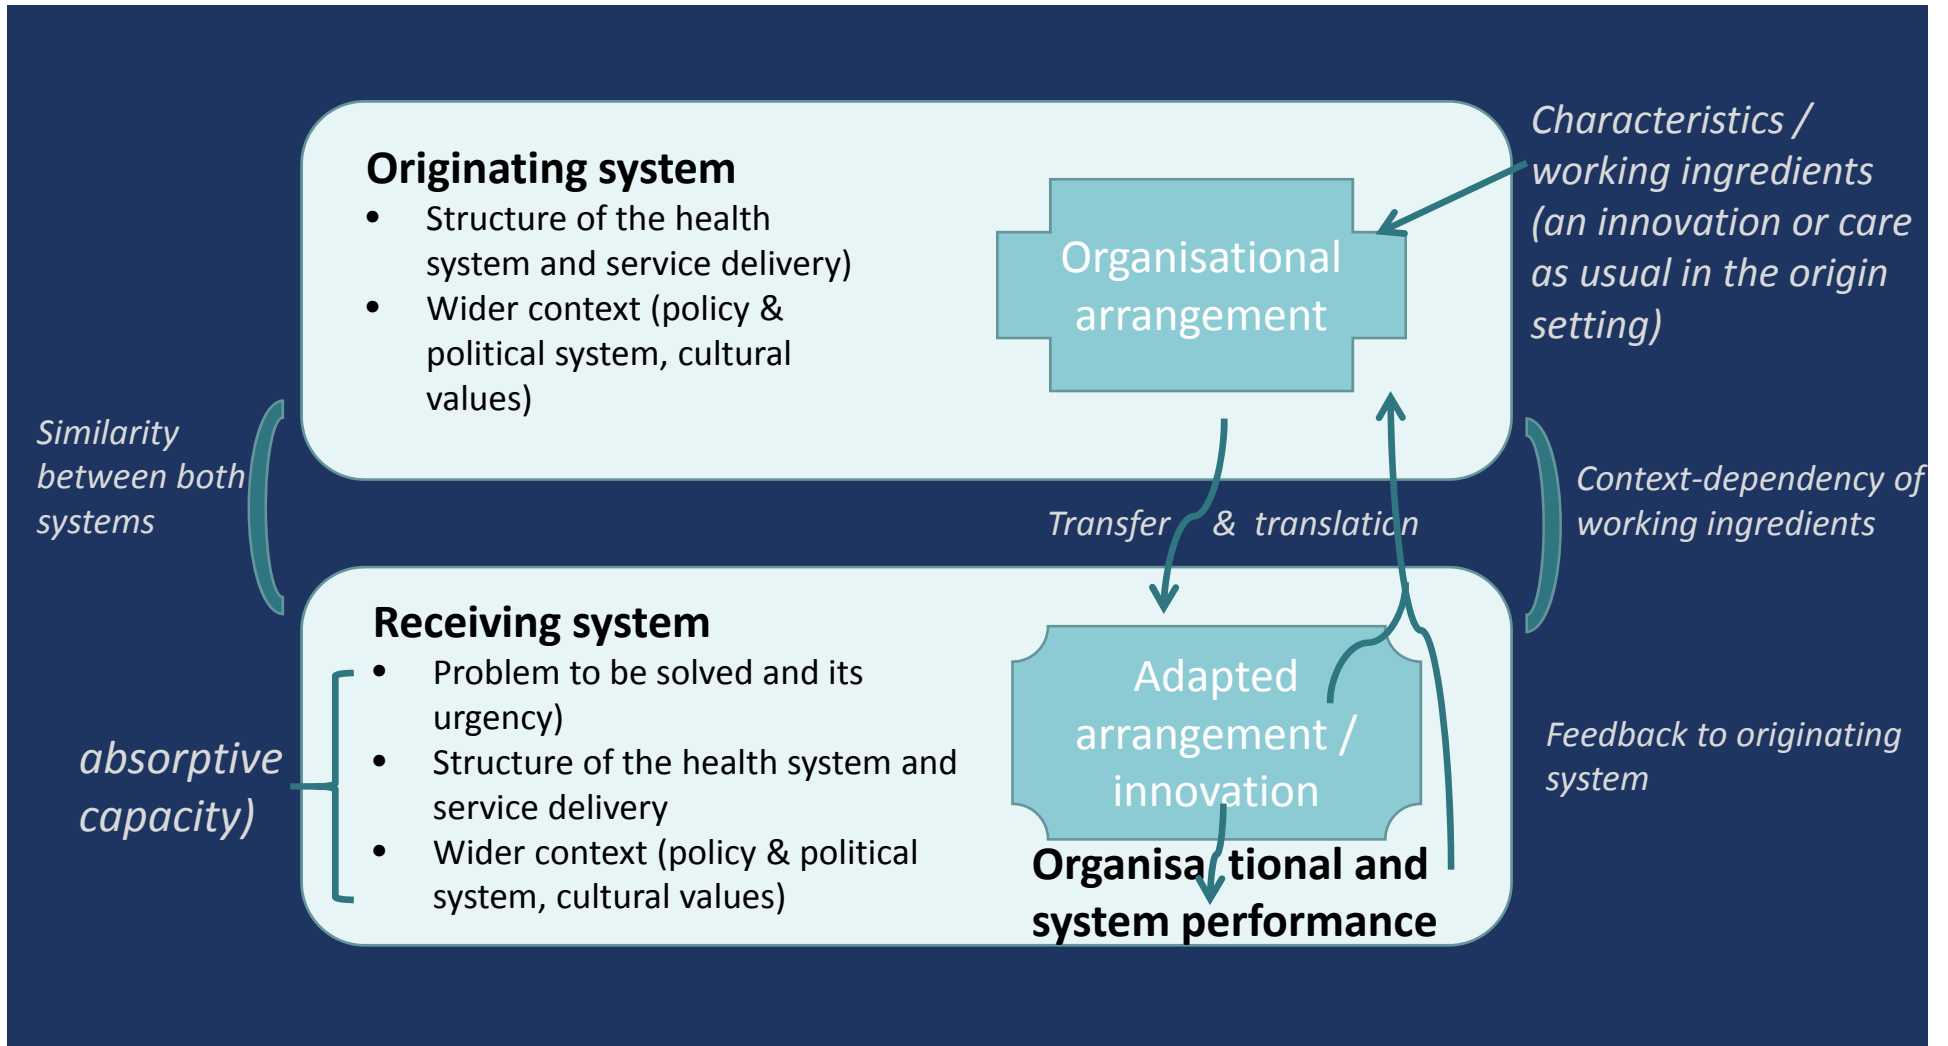

- Patient representation in every decision-making process about their health, e.g. approvals, HTA, and pricing & reimbursement
- Health care expenditures and personalised medicine. What (new) methods does HTA need to tackle this challenge?
- Role of HTA in identifying and de-implementing old technologies
- Evaluation of `non-technical or non-pharma dominated` programmes
- Increase collaboration accross countries in HTA
- How to implement a culture of quality in the whole health care system (incl. HTA, EBM,...)
- Development of incentives for health technology innovation that promotes innovation on socially necessary areas
- System of information on health system performance set up at EU level in order to allow comparison of EU health systems, including prices of medicines and health technologies

# Transferrability of service and policy innovations

# Conceptual model of service provision and policy transfer

# Example: transfer of population-centred, integrated care

Kinzigtal

Hamburg

**Key question: what are the preconditions a setting needs to put in place to make a solution work?**

Health centre in Castelldefels

GP practice in Bavaria

# Gaps in knowledge about transferability, absorptive capacity, scaling up and performance effects (1)

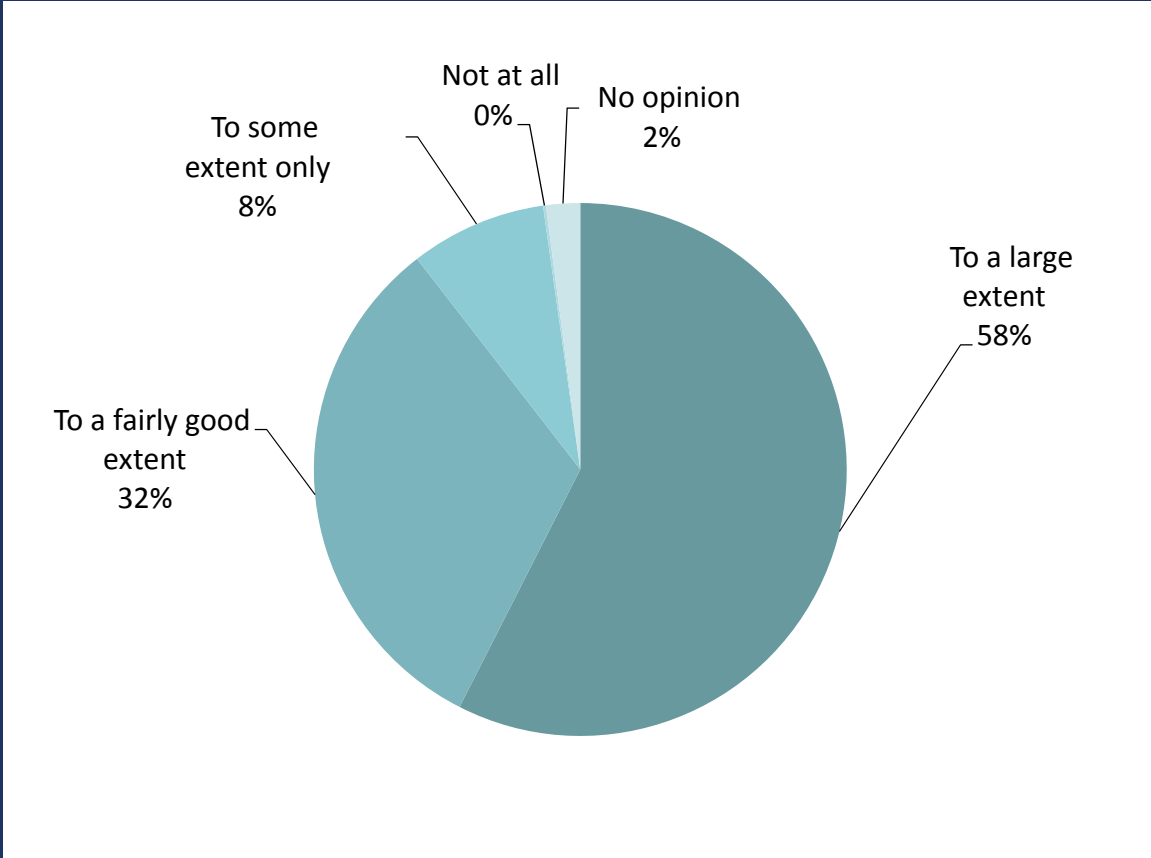

- Context is important but what *aspects of context*? Who to learn from?
  - Health system typologies to identify relevant contexts
  - Institutional embeddedness
  - Values
- *Specific features* of health systems, conducive to transfer of service/policy innovations
  - Role of national level support structures
  - Innovation funds, scanning innovations elsewhere
- *Type of evidence* needed to inform the successful transfer of service/policy innovations
  - Controlled studies, process and outcome evaluations, local experience
  - Novel innovations – not much evidence yet but high level of interest

## Gaps in knowledge about transferability, absorptive capacity, scaling up and performance effects (2)

- Translation and adaptation
  - Focus on mechanisms
  - Needed level of detail
- Facilitators and barriers for implementation of innovations
  - How to transfer insights from organisational to system level?
  - Absorptive capacity, policy making capacity
- *Impact* of service and policy innovation on health system performance
  - Whole system effects or partial effects
  - Unintended consequences, waterbed effects

**Parallel innovations**  
**Evaluation and monitoring**  
**Learning from negative examples**

# Preliminary online consultation results: Is there added value in doing research together with other countries?

# Input from HTA community

- Approaches to priority setting
- Transferrability of technology between health systems
- Organisational requirements
- Scaling up and scaling down
- Performance

**New technology + old organisation = costly organisation**  
**New technology + service and policy innovation = efficient organisation**
